Hello, I am 👋

Tuan Ngoc

UI/UX & Product Designer

About me

Turning complex problems into clear product experiences

I'm a Product Designer with a background in Graphic Design, focused on understanding people, simplifying complex workflows, and shaping digital products that are useful, intuitive, and scalable.

My experience spans enterprise workplace tools at Viettel, learning products at SAPP Academy, automotive services at Bave, and financial websites at Wecan Group. I work across user research, information architecture, prototyping, usability testing, UI design, and design systems—collaborating closely with Product Managers, Business Analysts, Engineers, and QA to turn insight into measurable product improvements.

Work Experience (Last 3 year)

2026

August 2026 – Now

Product Designer

@Viettel IT Center

I design internal products for Viettel, including Workplace, ERP, vOps, and political-affairs platforms. I research employee personas and map end-to-end project flows to uncover friction and improve the quality and efficiency of how Viettel employees work.

2025

Mar 2025 - Now

Product Designer

@SAPP Academy

At SAPP Academy, I was responsible for redesigning the LMS system for students, conducting UX research, and conducting usability testing interviews with the goal of improving product quality.

2024

Mar 2024 - Dec 2024

UI/UX Designer

@Bave Global Tech LTD.

In charge and handle research on UI and UX, perform interface design and user experience for company projects. Working directly with Project Manager & Business Analyst.

Contact

Needing my phone?

You can call me anytime & any day whatsoever!

P: +84913674939

You want some thing more professionally?

Here is my mail adress:

E: ngocdaitsh@gmail.com

I'm currently staying in Hanoi

A: Hoang Cau, Dong Da, Hanoi

Software Using

For Designing

For Animating

For Workflow

Product Thinking

User-Centered Design: Apply user-centered design principles throughout the product lifecycle to create intuitive, accessible, and meaningful user experiences.

Success Metrics: Establish measurable success metrics and KPIS to evaluate product performance and support continuous improvement.

Problem Solving: Identify user pain points, define design opportunities, and develop practical solutions that balance usability, business goals,...

Design Validation: Validate concepts through prototyping, usability testing, heuristic evaluation, and iterative design improvements before implementation.

Personal Skills

User Research: Conduct user research to identify user needs, behaviors, and pain points, translating insights into design decisions.

Heuristic Evaluation: Evaluate interfaces using Nielsen's 10 Usability Heuristics to uncover usability problems and recommend improvements.

A/B Testing: Design and analyze A/B tests to validate design hypotheses and support data-driven product decisions.

Usability Testing: Plan, conduct, and analyze usability testing sessions to identify usability issues and improve user experience.

Information Architecture: Organize and structure content to create intuitive navigation and user flows.

User Flow & Wireframing: Design user flows, task flows, low-fidelity wireframes, and interactive prototypes for digital products.

Design System: Build and maintain scalable design systems, including primitive tokens, semantic tokens, reusable components, variants, and interaction states.

UI Design: Create responsive, adaptive user-centered interfaces with a strong focus on consistency, accessibility, and visual hierarchy.

Workflow Skills

Agile Scrum Workflow: Collaborate effectively within Agile Scrum teams through sprint planning, backlog refinement, design reviews, and iterative delivery.

MVP Planning: Define and prioritize Minimum Viable Product (MVP) features based on user needs, business goals, and development feasibility.

Cross-functional Collaboration: Work closely with Product Managers, Business Analysts, Developers, and QA teams to deliver high-quality digital products.

Business Requirement Analysis: Read, analyze, and translate business requirements and documentation from Business Analysts (BA) into clear product insights and actionable design solutions aligned with user needs and technical constraints.

Design Handoff: Prepare development-ready designs with clear specifications, documentation, and component usage guidelines to ensure smooth implementation.

Portfolio

To review and evaluate the products I've made more visually, here is my online portfolio.
